Date	March 03, 2025	Time	6:53 AM	Conductor	Hugo Solis

FALLS ON THE SAME LEVEL

INTRODUCTION

Every single year slip, trip, and fall injuries are some of the most common and costly injuries that occur in the workplace. Many people probably assume that falls from heights cost companies more every year than falls on the same level, but this is not the case. According to one study, falls from heights were the third highest cause of disabling injuries at a cost to employers of \$5.4 billion. Falls on the same level came in higher at number two with a cost of \$10.1 billion.

In this meeting, we will discuss

- (1) Causes of Falls on the Same Level**
- (2) Best Practices to Prevent these Incidents**
- (3) Summary**

CAUSES OF FALLS ON THE SAME LEVEL

Falls on the same level are defined as a slip, trip, or fall in which the worker either impacts an object or the floor at the same level at which they are standing. Oftentimes, slip and trip hazards are the cause of these types of incidents. The exact hazards that cause these incidents can vary greatly though depending on the workplace. Here are some common causes:

- Oily or wet walking surfaces
- Ice/ snow in colder climates
- Uneven terrain
- Cracks or chips in a walking surface
- Changes in elevation
- Objects on the floor
- Cords
- Rugs
- Improper or damaged footwear

BEST PRACTICES TO PREVENT THESE INCIDENTS

- Practice good housekeeping and organization of work areas. Many of these hazards, especially trip hazards, can be eliminated solely through keeping a tidy work area.
- Do not be distracted when walking through work areas. Looking at your phone or something else can cause you to miss hazards that can lead to a slip or trip.
- Ensure that you have proper footwear for your work and that it is in good condition.
- Clean footwear of any mud, snow, ice, or moisture when possible when coming from outside to inside.
- Ensure there is proper lighting in work areas and that any changes in elevation are brightly marked.

SUMMARY

Slips, trips, and falls are responsible for countless amount of injuries in the workplace every single year. Take time every day to evaluate your work area for hazards that can cause these injuries. It is important to eliminate as many of the hazards that cause these incidents as possible in your workplace.

Group Discussion:

What could cause a fall on the same level here at our workplace?
